The 2-Way Relay Output Card is an internal peripheral for use with Axis EN series control panels.

This additional PCB provides a cost effective solution to providing 2 individually programmable 1 Amp rated, volt free, change over contacts.

The 2-Way Programmable Relay Card connects directly to the panel’s motherboard in which each output can be individually assigned to an output group to provide full support for dynamic zoning.

**Applications**

Ideal for any application where a number of programmable outputs are required at the panel, e.g. landlord/tenant interfaces.

The system can to be easily configured to provide additional outputs for the more complex cause and effect configurations using standard products.

**Features**

- Each output individually programmable
- Optional fail-safe setup
- Allow investigation delays
- Can silence option
- Instant response time
- Cost effective against ancillary hardware
- Each output 30V AC/DC, 1 Amp rating
- 3 year warranty as standard

**Order Codes and Options**

Mxp-507: 2-Way Relay Card

**Limitations**

Each output can be assigned to an individual output group and is fully programmable for any output function allowed within the Axis EN configuration programme. Only one 2 Way Relay O/P Card can be fitted to Axis EN Series Fire Panels providing a total of 4 programmable relays per panel.
