

## Sounder Active EOL

This module provides active monitoring of the sounder circuits in a fire system. Sounder circuits can be configured for compliance with EN54-13 by fitting and programming the use of this peripheral. In order to comply with EN54-13 all panel sounder outputs must be fitted with the Sounder Active EOL.

The Sounder Active EOL is a small and compact active end of line unit, designed for termination and housing in third party sounder output devices.

### EN54-13 Compliance

In order to comply with EN54-13, The Axis EN system must check and warn (prior to an alarm condition) if the voltage at the last device cannot be maintained under the applied alarm load conditions. In order to meet this requirement, the active EOL is required for all panel sounder outputs.

By using this device, third party accreditation assures compatibility as all components are individually tested and certified to the relevant harmonised product standard. This ensures that the system will fully operate, as intended when actually needed.

### Features

- For use in EN54-13 compliant systems
- Supports device removal
- Simple to install
- Small and compact
- For use with all Axis EN series control panels.

### Order Codes and Options

MXP-505:	Sounder Active End of Line device for Part13
