

The LifeLine SleepCOM2 is a stand-alone bedside unit linked to a vibrating pillow pad to wake a deaf or hearing-impaired individual from their sleep during an alarm situation.

The unit is fitted with an RF receiver that is triggered and maintained by the main LifeLine Px-100 control panel. On activation, the LifeLine system transmits a signal to activate the SleepCOM unit, which in turn triggers the vibrating pillow pad to alert the sleeping individual.

The LifeLine SleepCOM unit continues to vibrate until the main alarm is de-activated. There is no hard wiring so units can be moved to any room within the area/building covered by the LifeLine transmitter.

A low frequency strobe light illuminates to alert the individual if they are not yet in bed but may have taken off their personal pager.

The number of SleepCOM units working in conjunction with the LifeLine system at any one time is unlimited.

The SleepCOM unit operates completely independently of the LifeLine pager unit. This ensures that the unit is active at all times and is not reliant upon an individual having to manually place their unit correctly.

### Features

- Maintained Radio Link
- Mains powered
- Battery back-up in case of power outage
- Self-contained aerial
- LED Indicators for mains, battery charging and fault indication
- Can be transferred from room to room without any need for setting up again

### Specification

Dimensions (H x W x D)	115mm x 155mm x 115mm
Weight	0.38 Kg approx
Case	Off-white RDL 9002 brushed aluminium front & back plates
Power	230v AC
Indicators	Power, fault, battery charging
Connections	Power supply, vibrating pillow pad

### Order Codes and Options

LL-SC2:	SleepCOM Bedside Unit complete with digital clock and Vibrating Pillow Pad
