

MxPro 5 Rack Mount Control Panels

The MxPro 5R series are wall-fixing enclosures, providing an industry standard 19 inch rack solution. The modular assembly rack mount enclosures are designed for use with the MxPro 5 series of fire alarm control panels.

The panels and peripheral devices are housed in dedicated module assemblies designed to be installed into standard 19 inch rack mount enclosures. Enclosures are provided in different sizes with up to IP55 rating (IP44 with CAM key fitted/IP30 with outer glass door open).

In addition, the module assemblies can be mounted into commercial rack mount enclosures.

Applications

Ideal for any application where an IP55 requirement is specified or a modular assembly of fire control panels, programmable push button switches, mimics or any other third party apparatus is required in a 19 inch rack system.

The enclosures are ergonomically designed to provide practical, adaptable and robust housings for use within the fire industry.

All Advanced metal fabrication is designed for the MxPro 5 Series panels, power supplies, peripheral bus modules and network peripherals. Alternative enclosure sizes follow the same general arrangement.

The standard enclosures offer ingress protection to category IP55 with the outer door closed. Internal ingress protection (with the door open) is to category IP30.

Visual indicators can be seen through the glass panel. The outer door is not locked to provide access to Level 1 and Level 2 controls. An optional key-lock is available for critical installations.
